Question: What did you like most about this course?

Response Rate: 100.00% (6 of 6)

- Very informative, my favourite is how the faculty teaches and helps us. The faculty for this programme is very impressive. Developing the open-data-app gives us confidence to do more development work in php.  
I enjoyed how all our homework assignments and lessons really end up helping one another in the end. They all prove a specific point but then help build on to another assignment so that in the end we can piece everything together in our applications. I can see all the value in everything we are taught. I also wanted to add.. THANK YOU for teaching us WordPress in semester 1, it makes the transition so much easier. It is also helping some of us who need to use WordPress for our Studio Lab 2 final assignment as now I understand it easier after hardcoding PHP and JS. Awesome!
- I really enjoyed Javascript!
- The content.
- Learning Ajax is really awesome.
- each assignment builds on the others to make for a great final project we understand

Question: How could the course be improved to be of benefit to future students?

Response Rate: 100.00% (6 of 6)

1 I think its a very well developed course. I think we could learn a little more about ajax?

I don't think there is much I could really add, I feel like I've learned enough right now to keep me busy for awhile. I'd like to make a comment that is not necessarily specific to this course (there should be an overall survey section for this stuff), but I really think this course and other courses taught by Tom should evolve into it's own full blown out program, web developer. Call me up if it does happen as I feel that I'd love to spend more time on these courses and develop/become more comfortable with the concepts to take them to the next step. The current problem is we have a lot of repetitive assignments in our more visual/design classes. Just a suggestion, let me know if this program ever happens as I see other colleges with some programs of the likes but they are not in Ottawa.

2

On another note, this is more of a suggestion that may not happen in the near future. For now, I'd suggest having a 2 hour lab every week for both MTM1531 and MTM156 (combined in that 2 hour) that has no lessons (aka more homework), but just help from the PA and the Professor. I feel like when I come to class, I am happy to get help after my lesson but I feel I'd like my questions answered before I move on to a new lesson, or at least have time guaranteed to get them answered if the lesson runs too long or too many people need help. Just a suggestion!

3 The course should be longer. I felt that we didn't have enough time to cover everything.

4 Have better computers because the computers are either too slow, don't have the programs that we need, or people delete them. Also have more of an advanced course for people who want to be challenged.

5 Try explaining more about the visual or animation aspect of javascript. I personally enjoy things which are done with java script than using animations swfs or gifs ect..

6 not much, except maybe less github

**Faculty: BRADLEY, THOMAS**

**Question: What did you like most about the course professor?**

**Response Rate: 100.00% (6 of 6)**

1 He is very impressive. I like how i can email him anytime for help and he even replies during non working days. Very intelligent and really gets us working inn a good way.

2 Tom really understands his students both as students but as people as well. He also understands that our class is made of different types of people who learn different ways (ex: when he would block out some screens during lessons for those who wanted no distractions and just to listen, but for those who liked his previous teaching method, we could just follow and type along - much appreciated!) He's very realistic and understands people get behind in such an intense program - thank you!

3 He was great! Always helped all the students. Thomas also explained the material very well.

4 Thomas is the best professor ever.

5 Really nice professor. You are the star of every one .. Keep the good work up ..

6 always time for a student in need of extra-hours help

**Faculty: BRADLEY, THOMAS**

**Question: What, if anything, could the professor do differently to be of benefit to future students?**

**Response Rate: 100.00% (6 of 6)**

1 I like how he teaches.

2 Honestly, I don't have any other feedback except... I want a directory with all your lessons and solutions when the program is done! Now that'd be awesome (and less scary to go out there after graduation!)

3 He has been great since first session.

4 nothing at all

5 Try to give more javascript based assignments before we start php .. Like doing visual things using javascript.

6 the mix of github, edumedia, and phpfog for the assignments makes it hard to get strait
